

Ships expansion

Simple Ground Equipment and Service : Static or Dynamic ships expansion

It's possible to display static and dynamic ships in SGES.

Moving ships and static ships include the default X-Plane carrier and Perry frigate, the Meko 360 frigate, the LHA Tarawa, the HMS Hermes carrier and submarines (Virginia class, Akula class, Barbel class). You can also install the Nave Cavour and the HMS Dragon (Type 45 Destroyer).

We now distribute third party ships by Alpeggio, Helodriver89 and Juanik0, with permission, in a fashion compliant with intellectual property rights.

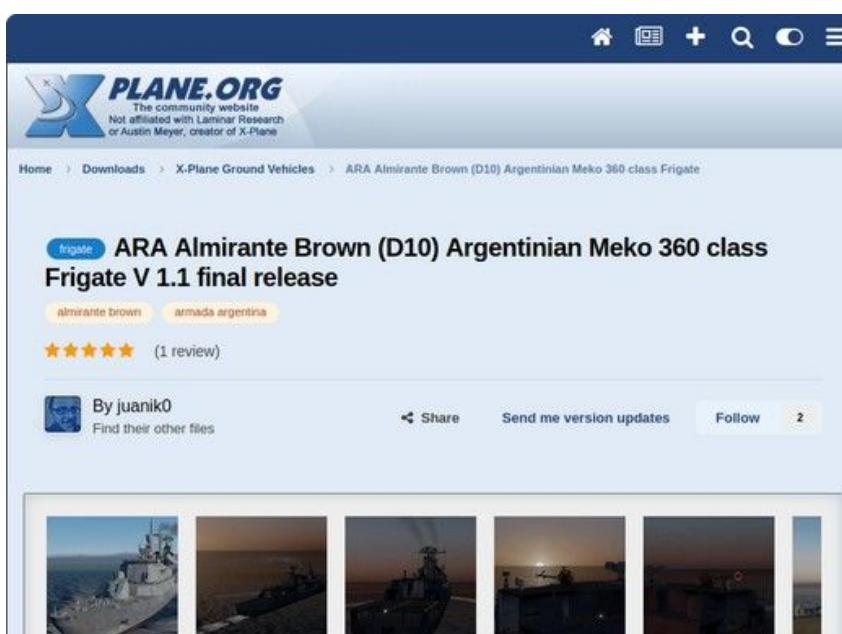

But you still **need** to **install X-Trident Aircraft Carrier Cavour** and the **Type 45 Destroyer** if you wish to also have them.

Credits. Virginia and Akula, XPJavelin's own work. HMS Eagle by Alpeggio and juanik0. MEKO 360 by juanik0. USS Tarawa by juanik0 and helodriver89. Barbel class SS-581 submarine by Alpeggio. Original model used by Alpeggio is from Gacek (at 3dwarehouse) under GML licence.

- 8. HMS Dragon : <https://forums.x-plane.org/index.php?/files/file/93936-type-45-destroyer-hms-dragon>

Already installed.

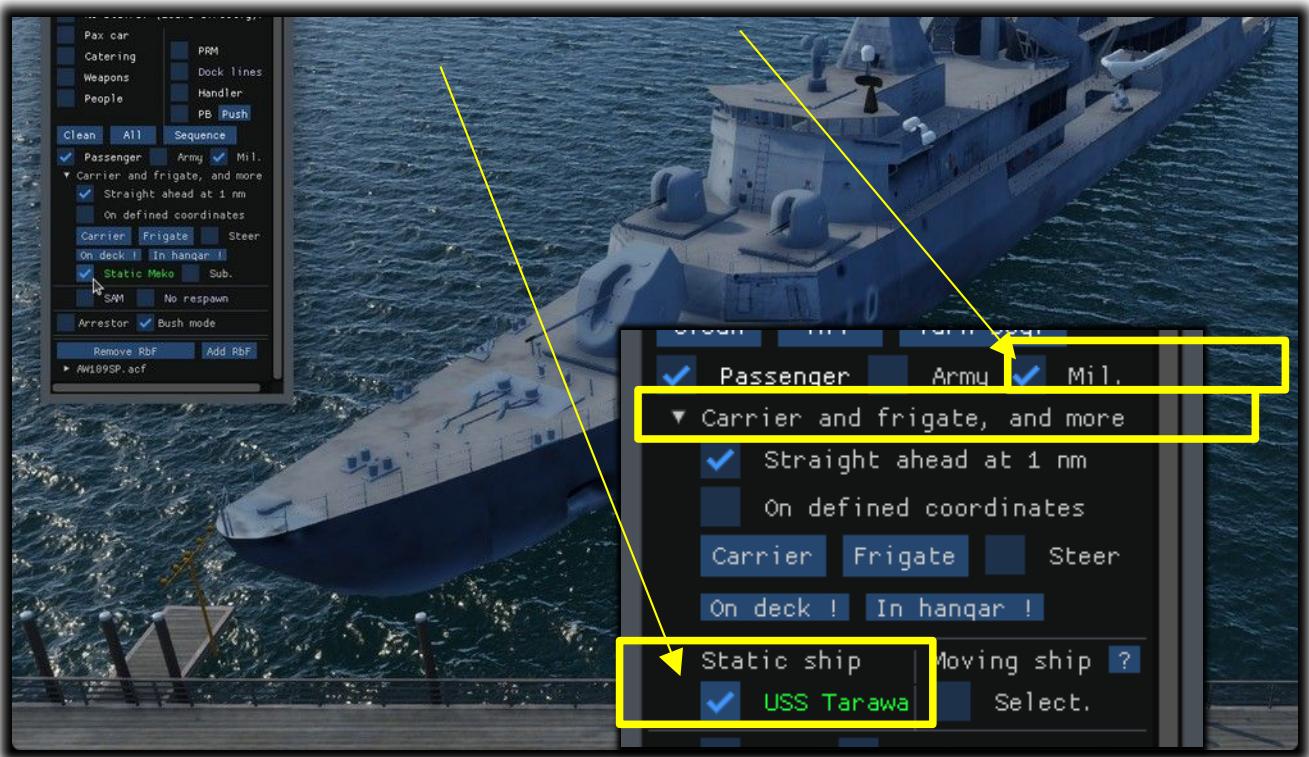

To display the ships in game, open the SGES menu.

- 1) Then tick the Military option ("Mil.").
- 2) Open the Carrier and frigate submenu.

Decide either to display a static vessel or a moving boat.

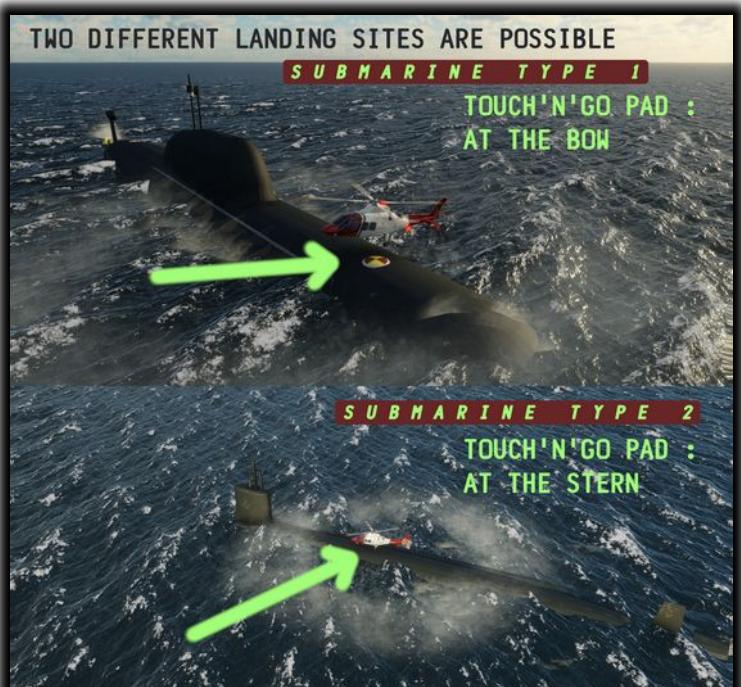

- 3) By cycling each checkbox several time, you can browse through the available boats.
The available boats depend on what you have currently installed on your system.
You also need to be at sea, or the checkbox will uncheck itself and no boat will be displayed.

From now on, you may toggle between the X-Plane carrier, the X-Plane frigate or the Argentinian frigate or the USS Tarawa for instance. Two options exist : static or dynamic ship.

Landing on the ships is possible.
Even the Submarine can be landed on (at the bow for the Akula and at the stern for the Virginia).

The landing physics is not perfect, but emulated to a level authorizing to land on the aircraft carrier and helicopter pads.

X-Trident Cavour Aircraft Carrier

[Org Store](#)

You can also use the Italian Nave Cavour aircraft carrier which is sold with the **X-Trident** Harrier AV-8B (payware aircraft).

https://store.x-plane.org/Harrier-AV-8B_p_919.html

We will automatically detect the Nave Cavour if the AV_8B is installed as follow :

[Aircraft/AV-8B v2.0 for x-plane 11.50+/-](#)

or

[Aircraft/Fighters/AV-8B v2.0 for x-plane 11.50+/-](#)

or

[Aircraft/Military/AV-8B v2.0 for x-plane 11.50+/-](#)

or

[Aircraft/PAYWARE/Fighters/AV-8B v2.0 for x-plane 11.50+/-](#)

or

[Aircraft/XTrident/AV-8B v2.0 for x-plane 11.50+/-](#)

or if the Nave Cavour folder is dropped as follow :

[FlyWithLua/Scripts/Simple_Ground_Equipment_and_Services/Nave Cavour/](#)

Alternatively it is also possible to write your own path to the Nave Cavour object in the file [FlyWithLua/Scripts/Simple_Ground_Equipment_and_Services_CONFIG_vehicles.lua](#)

Type 45 Destroyer
